Easy-LOCFIELD® Barrel

Wilms meier Solutions

Advantages

- easy to install
- return your empty bins and forget
    - automated bin detection
    - automated event generation
- event notification by email
- API based integration into existing backend systems possible

Description

If you want to automate the refilling process of your consumer goods, the Easy-LOCFIELD® Barrel is the starting point. All item carries / bins equipped with RAIN RFID tags are recognized as soon as they are thrown into the Easy-LOCFIELD® Barrel.

Simply throw the empty bins in which your consumer goods are stored into the Easy-LOCFIELD® Barrel. It recognizes and identifies the bin and generates a notification. Easily via email or fully integrated into your backend system. All you need is a normal socket for the power supply and access to the WLAN. Alternatively, a mobile hotspot can even be integrated - this even eliminates the need for LAN integration.
